KEESHONDEN Pedigree Search

An Internet service provided by Chipper Jones, Gypsy Rose & Friends

Pedigree Notes

04-26-04 11:40 RCVD

In Memory of a treasured friend
Keesbar's Brandi Flip

click to **find a littermate/breeding**

click to **do a trial breeding**

step 1	Select the number of generations to display in the pedigree. For printing, 5 generations is the best choice. 5 Clicking on any name <u>within the chosen pedigree</u> will bring up that dogs pedigree
step 2	Enter the name, or partial name, of the Keeshond to search for. For example, entering "Wistonia" will find all Keeshonden whose names contain "Wistonia". Wistonia Database now contains 39,072 Keeshonden
	<input type="radio"/> Database updated April 23, 2004 <input type="checkbox"/> indicates that a picture is available *
step 3	Click on the "Search Now" button to see the list of matches. <input type="button" value="Search Now"/>

Scottish Terrier Pedigree Search

An Internet Service provided by
Mary O'Neal (Maryscot Scottish Terriers)

It only takes a few simple steps to display your Scottish Terrier pedigree.

	Select the number of generations you will want displayed in the pedigree. For most computer printers printing Landscape mode, 5 generations is the best choice. <input type="text" value="5"/>
	Enter the name, or partial name, of the Scottish Terrier to search for. For example, "Maryscot" will find all Scottish Terriers whose names contain "Maryscot". This will also find any with "Maryscots". <input type="text" value="Maryscot"/>
	Select which database to use: <input checked="" type="radio"/> Mary O'Neal's database, over 71,190 entries. Last updated 01 Apr 2004
	Click on the "Search Now" button below. This will begin the search. The database is quite large, so do not be surprised if it takes a minute to see the list of matches. <input type="button" value="Search Now"/>

Last updated 04/19/2004 10:27:17

Back to Cavaliers Online! E-zine Community

WELCOME to the Pedigree Database of 40,100 Cavaliers

On April 21, 2004, MBFS (The Breeders Standard) purposefully and willfully stole the Pedigree Databases of many breeds, including this one, using a data mining robot. They are now offering access to the data for use at \$9.95/month from their site.

Many of us database owners have spent over 5 years keying this data in. MBFS stole it in a few hours.

Click here to read what he sent out justifying what he did.
Please pay special attention to paragraph three.

It is now necessary to include this:

NOTICE: You are not authorized to access or query (search) this CAVALIER KING CHARLES SPANIEL database through the use of automated, high-volume, electronic processes or harvesting robots.

TERMS OF USE: The Data in the Cavaliers Online's CAVALIER KING CHARLES SPANIEL database is provided by Cavaliers Online for information purposes only, and to assist persons in obtaining information about or related to a Cavalier King Charles Spaniel record/pedigree. By submitting a CAVALIER KING CHARLES SPANIEL query (search), you agree to abide by the following terms of use: You agree that you may use this Data only for lawful purposes. The compilation, repackaging, dissemination or other use of this Data is expressly prohibited without the prior written consent of Cavaliers Online.

You agree not to use automated, high-volume, electronic processes or robots to access or query the CAVALIER KING CHARLES SPANIEL database. Cavaliers Online reserves the right to terminate your access to the CAVALIER KING CHARLES SPANIEL database in its sole discretion, including without limitation, for excessive querying of the CAVALIER KING CHARLES SPANIEL database or for failure to otherwise abide by this policy. DONATIONS GRATEFULLY ACCEPTED**Click Here** Those who **donate** will have their submissions entered first!

Aarh Online Editor

Now - Edit Your Website
Yourself!

Also please visit our sponsors.

It only takes a few simple steps to display your Cavalier pedigree.**step 1**

Select the number of generations you will want displayed in the pedigree. For most computer printers printing in Landscape mode, 5 generations is the best choice.

5

step 2

Enter the registered name, or partial name, of the Cavalier to search for. For example, entering "Amantra" will find all Cavaliers whose names contain "Amantra". As the same kennel names are sometimes used with different spellings, try entering a different spelling. Also try leaving off the 's. or partial name, of the cavalier to search for.

step 3

Click on the "Search Now" button to begin the search. The Cavalier King Charles Spaniel Database has **approximately 40,100** entries, so do not be alarmed if it takes a minute to see the list of matches.. Please read the Disclaimer below. Thanks to all who sent information, your patience is appreciated. It takes a great deal of time to check and edit and add to the database.

THANK YOU to all who have donated - it is greatly appreciated.

New! Join the Mail List and Be notified of new updates by email**Subscribe to COLPedigrees**

enter email address

Powered by groups.yahoo.com

DISCLAIMER: Every effort has been made to present accurate information. This is NOT a registry, not all registered cavaliers are included. If your dog is not listed it is because it has not been submitted.

**We will begin taking all Submissions again in the near future.
BUT, if you Donate your submission well be added within 24 hours.**

Special Thanks to Helena Bona of Cucciolo Cavaliers for her latest contribution to the database.

Also Thanks to the many who have taken the time to submit information.

Building the TBS .NET Database

APRIL 29, 2004, FRANKFORT, ILLINOIS - Here at Man's Best Friend Software, we are committed to adding the maximum possible value to The Breeder's Standard(tm) .NET, our new web-based program. Right now, we've got over 2.1 Million dogs in the program, representing 200 breeds. Some breeds have over 100,000 animals in them. Why are we putting these dogs into the database? Because we're trying to save you the effort of typing these dogs in from other sources. Typing adds the chance of errors in transcription, and frankly, you have better things to do with your time. You have dogs to breed and show, and we want you to be able to maximize your time doing just that.

We have obtained data from many sources. One source we'd especially like to thank is the Orthopedic Foundation for Animals at <http://www.offa.org>, a truly fine organization run by the very best people anywhere. In the near future, our present OFA data will be extended by hundreds of thousands of certifications (we have about 250,000 right now), and OFA-numbered animals will have links directly to the OFA "Vertical Pedigree" engine. As new OFA certifications come through, they will be added to the database.

Another source of data is free web-based pedigree databases. We have developed a robot program that is able to acquire dogs from these sources, strip out the HTML, and put them into TBS. NET. We have used this robot to acquire a large number of dogs of many different breeds. As a precaution against "stepping on toes," we checked for a robots.txt and for HTML META tags that tell robots to go away. This is the Internet version of a "no trespassing" sign. If either of these things were found, we went away. As for copyright concerns, in the same way that one cannot copyright the names and addresses and phone numbers in a telephone directory, one cannot copyright the names or vital statistics of dogs. So, doing this was lawful and ethical, and we want you to know that we did it.

We would like to thank the proprietors of these sites for keeping them open and, by doing so, making it easier for you to do your vital work. We have extended offers to some to host their sites at no cost on the TBS.NET engine, as an additional way of saying thanks. Their generosity, made manifest by their refusal to "hoard" the databases to themselves, will make not only our customers, but dog lovers everywhere happier, as breeds improve by the sharing of information.

We will continue to locate and acquire data for our customers, so that TBS.NET will remain what it is: historically powerful and easy to use, with

EXH4

the best pedigree library anywhere.

Schipperke Pedigree Search

May of 2004, MBFS (The Breeders Standard) has stolen the Pedigree Databases of many breeds including this one using a data mining robot. They are now offering access to the data for use at \$9.95/month from their site.

I spent the last 4.5 years keying this data in. MBFS stole it in one day.

Please complain by email or phone to:

Administrative Contact, Technical Contact:
 Tamburo, John F johntam@mbfs.com
 Versity Corporation
 655 N. LaGrange Rd.
 Frankfort, IL 60423 US
 or call
 815-806-2130 fax: 8158062134

New, MUST READ: [Important: Information on MPS IIIB](#)

New - View MPS IIIB status:

Normal	Carrier	Affected	All
mps3b-n(p)	mps3b-c(p)	mps3b-a	mps3b

Note, the (p) means a p is added to designate a default based on the pedigree, that is, the dog must be clear if parents are clear, or the dog must be a carrier if the other parent is clear and there are carrier offspring.

These designations are from owners submitting the 'DNA Test For Schipperke MPS IIIB' Result Report from the test done at UPenn. and have been added at the owner's requests.

Please forward to John...

John;

It has come to my attention that you have stolen Keeshonden data from my website.

The proof is easily determined as there are 32 "invented" names and pedigrees in the database and you have them all on your site.

If you blatant theft of data is not removed from your site within 5 days, I will publish to each and every dog based list the sleazy methods of your companies operation.

Don't bother to threaten lawsuit as your threats are pointless in view of the absolute proof that I have in my possession. Further, I will then institute proceedings against your host provider re their allowing publication of stolen material....

DON'T bother telling me that the data is public domain... The data is...your theft from my source is not...

More damning evidence:

Aside from your e-mail open admission of how you hacked in and "mined data from my site, a review of the logs at Keesdog.com, has now verified your entry and harvesting" activity, The IP address traces back to you, using MSIE 6.0 with your NT5.1. A complete log of your dates of entry and activities is now on record.

This activity had substantially increased band width usage and records show that during the period that you were logged in there was a significant site slowdown as well as rejection of users due to traffic.

THIS MR T. constitutes a verifiable attack on my site with denial of service to my users. . You... have caused a verifiable denial of service for which I paid..

So.... PLEASE don't preach legalities to me... you are an offender.

Unlike you, I don't threaten to waste time with senseless legal action, what you did was despicable.. I will just add these events to the facts to be revealed.

John, my goal is not to deny you your right to sell access to your database, but to simply have you remove MY data from your site. I will go to whatever lengths that I deem legally necessary to try and convince you to remove my data from your site.

From what I understand, others will soon join me in enlightening others of your unethical behaviour (all documented), as well as trying to convince you to "do the right thing" re canine data..

You John will be the only loser in this argument as it will be debated in an open dog forum. Sure you can threaten to "sue the world"... Your money and your time. Would the money and efforts you will have to expend not be better spent in promoting and servicing your legitimate business interests rather than chasing rainbows for your own ego?

You John Tamburo stand to be the only loser, so once again PLEASE... remove my data from your site...

As I have repeatedly said none of this is meant as a threat. I have no wish to tarnish your reputation or interfere in your company operations in any way. If/when I receive confirmation of removal of my data from your site, I will vanish into the background.

Untitled

Just wondering how the rest of you with online databases feel about them being "harvested" so another software company can charge a monthly fee for people to use your info? My opinion - Our hard work collecting, merging and hand entering is putting money into their pockets. Judging from the looks of it, they have already taken all of the databases at worldpedigrees, unless you gave them to them Ron? Here is the list:
<http://www.tbsexp.com/bcounts.asp>

As for this: "As a precaution against "stepping on toes," we checked for a robots.txt and for HTML META tags that tell robots to go away. This is the Internet version of a "no trespassing" sign. If either of these things were found, we went away." Of course I have a robot meta tag that gives permission to index all. I don't know any general interest/educational website that does NOT want to be indexed in the search engines. For them to use that as their excuse to steal is despicable to say the least. They should be up front and ask first not sneak around with a webbot.

Was anyone on this list approached by MBFS and asked for your breed database? Were you offered free space on their server?

Subject: Re: Database Theft

OK - this does tick me off. Especially after all their brouhaha about not being able to share info typed into their database because they owned the copyright to BXF or whatever (it's been so long since I switched that I've forgotten the details.

BOTTOM LINE - if a ped database is stored in the CGI-BIN of your site (using the Alfin method) - will it be searchable via their robots??

Will a meta-tag on any of my webpages displaying an HTML pedigree asking a robot to follow but not index prevent them from stripping my info?

What robots.txt file can I use to protect my work??

TIA,

Subject: Re: Database Theft

As someone who spends many hours a week on my 22 breed databases on the worldpedigrees site, I have absolutely no objection to anyone having the data that I have accumulated as long as it is for non commercial purposes. However, I do object strongly, to someone purloining it for personal gain. At the very least if they have used my bases, I hope that they will make significant contributions to the breed rescue and health schemes that I support or to the Animal Health Trust. I would confirm that I have had no approach from MBFS for permission to extract or use my data and no offer of free web space on the MBFS site.

Untitled

Ron - Do you have any comments on this, what is in effect, commercial piracy.

Regards

Mike Herwin

Hi Roxy,

My comments as follows:

- I certainly wasn't approached by MBFS about harvesting of data from our www.worldpedigrees.com web site and I will be taking measures to prevent it.
- Its interesting that they specifically state there is no copyright in data as this seems at odds with legal threats they have made in the past.
- The statement that this is ethical is a bit far fetched. From my perspective I would like to see people share data but I respect the fact that some authors choose not to do so.
- It also appears inconsistent that they take data from other online databases and yet specifically do not make their "own" data available.

Subject: Re: Database Theft

As the person responsible for the beagle data base I can tell you that the under 20,000 dogs on the MBFS site goes no where near the almost 118,000 beagles currently on the world Pedigree site. Like Mike I am spending many hours per day importing data and the \$1000 + it has cost me to source a lot of this data makes me cross that someone like this will benefit from my investment.

I was happy to share with others genuinely interested in the breed. Only yesterday I noticed someone had used the information on world pedigrees to build pedigrees for their web site. These people had given me a link but I have written to them and asked that they also give a link to World Pedigrees.

I will be very interested in your comment on this one Ron.

Here's what the ISDS says about its pedigrees:

Copyright

The ISDS Stud Book and Pedigree Charts

It is very important the Society protects the value of Stud Book information and so the information published in the Stud Books is

Untitled

regarded by the Society as copyright. This means that the contents may not be copied or used in any form without the permission of the Society.

Anyone who compiles pedigree charts for more than a private purpose must seek the permission of the Society and acknowledge the source of the information on that chart.

The wording in the 2000 Stud Book says, "Purchasers of the Stud Book may generate their own pedigree records and charts and pass these on with any dog that they sell. However, the generation of pedigree charts for sale or publication is controlled by the Society's rights of information ownership".

Anyone involved in producing pedigrees for sale can be issued a simple annual licence and will be able to endorse all charts with this statement. We are happy to assist this 'cottage industry' :-

Produced under licence from the International Sheep Dog Society 2002.

Information protected by copyright.

If you purchase pedigree charts it will be helpful if you ask and check that the licensing statement has been applied.

>
> TIA,

I would HOPE that a ROBOTS.TXT file would work in this case.

HOWEVER, consider that the MBFS spider is looking for *pedigrees*, not data. Thus an individual posting a text pedigree as HTML w/ tags indicating that it is a pedigree will be fair game to any spider.

CONSIDER - unless the meta-tags ALSO say DOG & specify breed... how would MBFS
know what species is reported? They could easily end up w/ a DB
supposedly
on dogs that includes horses, hamsters, cats, etc

Untitled

re: DBW files, they are straight data - no HTML tags. Unless this spider is especially searching for DBW files, rather than html tags... no reason the contents would be noted.

Interesting concept... MBFS mines data from internet, will probably want datafiles from new users THEN they turn around & charge you to access your own data! what happens if you want to move to a different program... how do you get YOUR data (w/ edits & additions) back?

would love to know if the IRS has ever checked into this company!
